

Rapid Response

ORDER TODAY SHIPPED TOMORROW

Our ***Rapid Response*** program gives new meaning to the term quick coupling.

With Ringfeder's ***Rapid Response*** program, order our most popular shrink disc locking devices and couplings by 12 p.m. Eastern Time—and they will ship out the next day.

Rapid Response Requirements

- Order by 12 p.m. Eastern Time
- Maximum order size: 10 units for shrink discs, bellows, and servo insert couplings
- Shrink Disc: RfN 4061 standard series up to size 200
- Metal Bellows Couplings: AKD, AKN, DKN, EKN series
- Servo Insert Bellows: GWE 5102, 5103, 5104 and 5112 series

RINGFEDER
POWER TRANSMISSION

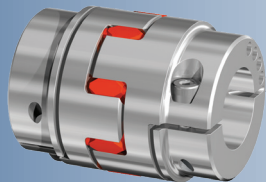

RINGFEDER® Shrink Disc locking devices can handle high forces, thanks to a system of tapered thrust rings, an inner pressure ring and locking screws. Tighten the locking screws around the circumference of the disc, and the outer thrust rings are drawn together—compressing the inner rings against the hub and the hub against the shaft.

- **Rapid Response** applies to RfN 4061
- Full, half and split standard series
- Up to size 200

RINGFEDER® GWB Series Metal Bellow Couplings offer backlash-free shaft connections within tight spaces. With bellows made from stainless steel, they provide high torsional stiffness and excel at compensating for angular, axial and radial misalignment.

- **Rapid Response** applies to AKD, AKN, DKN and EKN series

RINGFEDER® GWE Series Servo Insert Couplings provide vibration damping and misalignment compensation to keep your servo-driven systems running smoothly. Torques range from 0.5 to 1,920 Nm.

- **Rapid Response** applies to GWE 5102, 5103, 5104 and 5112 series
